### Services

**Community:** Colonia Esperanza, Municipality of Praxedis G. Guerrero.

### Water System

| Water Coverage: | 49 % |
| Domestic Hookups: | 95 % |
| Commercial Hookups: | 5 % |
| Industrial Hookups: | 0 % |
| Water Supply Source: | Esperanza Water Well |
| Number of Water Hookups: | 175 |

### Wastewater Collection System

| Wastewater Coverage: | 0 % |
| Number of Sewer Connections: | 0 |
| Domestic Connections: | 0 % |
| Commercial Connections: | 0 % |
| Industrial Connections: | 0 % |

### Wastewater Treatment

| Wastewater Treatment Coverage: | 0 % |

### Solid Waste

| Solid Waste Collection Coverage: | 100% |

### Street Paving

| Street Paving Coverage | 10% |

### 1.d Legal Authority

**Project Sponsor:** Junta Central de Agua y Saneamiento de Chihuahua (JCAS, for its initials in Spanish) in coordination with the Junta Rural de Agua y Saneamiento de Colonia Esperanza (JRAS, for its initials in Spanish).
### Legal representative:
Gabriel Márquez-Holguín

### Legal instrument to demonstrate legal authority:
The legal authority of JCAS and JRAS is established in Article 1564 of the Administrative Code for the State of Chihuahua. JRAS is authorized to provide water and wastewater collection services to the community, whereas, JCAS is the regulatory agency and the entity responsible for developing infrastructure improvement projects in Colonia Esperanza.

### Date of instrument:
May 1, 1950.

### Compliance with agreements:
- 1889 International Boundary Convention
- 1944 Water Treaty
- 1983 La Paz Agreement, or Border Environment Agreement
- 1990 Integrated Border Environmental Plan (IBEP)
- Border 2012 Program

### 1.e Project Summary

#### Project description and scope:
Expansion of the water system to unserved areas in Colonia Esperanza, Chihuahua, including the construction of new domestic hookups and the rehabilitation of existing hookups, a new disinfection unit, and a telemetry system.

#### Components:

##### Potable Water
Water system expansion in Colonia Esperanza:
- Supply and installation of 31,440 linear feet (9,583 m) of 3" diameter PVC piping.
- Supply and installation of 13,865 linear feet (4,226 m) of 4" diameter PVC piping.
- Supply and installation of special parts for water distribution system looping.
- 290 hookups 3" diameter.
- 70 hookups 4" diameter.
- Supply and installation of a chlorine gas-based disinfection unit.
- Telemetry system to automate well-storage tank.
Population Served: 1,546 inhabitants

Project Cost: $333,443.88 USD

Project Map: Figure 3 shows the proposed drinking water system.

Figure 2. Map of the proposed water distribution system

1.f Project Justification

Project Justification:

- The proposed project will provide potable water to the population that currently lacks service in the project area.

- Residents of the project area currently lack potable water service and rely on hauled water to obtain their water supply. The implementation of the proposed project will help provide adequate water service to approximately 1,546 residents. This action will help reduce the risk of infections associated to poor water quality.

- The project will help increase water service coverage up to 100% by installing approximately 360 hookups (new and rehabilitated).
Urgency of the project or consequences of no action: The lack of these services jeopardizes the health of area residents, as it exposes them to an increased rate of gastrointestinal diseases due to non potable water consumption.

Prioritization process category: Category 1

Pending Issues:

None.

Criterion Summary:

The project falls within BECC's Priority Sectors and meets the basic general criteria. Currently the wastewater collection system and the wastewater treatment plant are under construction, these projects were certified in 2007 and the construction is estimated to conclude in October 2009, beginning operations immediately.
2. Human Health and Environment

2.a Compliance with Applicable Environmental Laws and Regulations.

Environmental and Public Health needs addressed by the proposed project:

Half of the local residents lack potable water service and obtain water for personal consumption from hauled water.

The lack of potable water service results in a number of health issues related to the unavailability of good water quality for human consumption increasing the risk of incidence of water borne gastrointestinal diseases.

The project meets the following applicable environmental laws and regulations:

Official Mexican Standard NOM-127-SSA1-1994, which establishes treatment processes and quality standards for drinking water for environmental health and human use and consumption.

The project will follow the guidelines established by the Water National Commission (CONAGUA, for its initials in Spanish) for the construction of this type of infrastructure. Additionally, the tasks are not expected to impact protected areas or ecological reserves since they will be developed within previously impacted urban and rural areas. During the implementation of the project, the JCAS and CONAGUA will oversee the tasks to meet compliance according to the aforesaid guidelines.

2.b Human Health and Environmental Impacts.

Human Health Impacts

Direct and indirect benefits to human health:

The project will supply potable water with adequate quality to prevent health hazards.

The quality of life of project area residents will improve by providing them access to public potable water services.

Health statistics:

Water borne diseases are caused by pathogenic microorganisms that are directly transmitted as a result of inadequate wastewater disposal practices and unhealthy water supplies. An individual may become ill after drinking water that has been contaminated with these organisms, eating uncooked foods that have been in contact with contaminated water, or having bad hygiene habits that contribute to the dissemination of diseases by direct or indirect human contact. Water borne diseases may be caused by protozoans, viruses, bacteria, and intestinal parasites.

Environmental Impacts

Direct and indirect benefits:

Environmental impacts:

Minor environmental impacts are anticipated from the development of the different project phases, provided the project tasks are implemented in accordance with the specifications of the Environmental Impact Assessment and taking into account the mitigation measures established therein.

Potential impacts include the following:

Construction Phase

- Fugitive dust emissions
- Air pollutant emissions from construction machinery
- Temporary roadway blockages; presence of workers in the area
### Operation Phase

No impacts are anticipated during the operation of the Drinking Water System.

### Mitigation measures:

Mitigation measures will include the following:

- Application of water to reduce fugitive dust emissions
- Tune up vehicles to reduce emissions
- Placement of warning signs to prevent potentially hazardous situations

### Impacts:

The environmental impact resulting from the project's implementation will be positive overall, inasmuch as:

The project will help provide potable water to the community, and improve the quality of life of local residents by reducing risks associated to inadequate water management.

### Transboundary Impacts

Due to the proximity of Colonia Esperanza with various communities in the Hudspeth County in the United States, there are frequent border crossings between cities. The expansion of the drinking water system in currently unserved areas will have a direct positive impact on the health of residents of cities such as Fort Hancock and Acala, Texas and the entire region. These actions will reduce the risk of waterborne diseases caused by the lack of drinking water.

The wastewater generated from this project will not adversely impact surface waters because this wastewater will be treated at the existing WWTP which has sufficient capacity.

The wastewater from Colonia Esperanza is discharged to the rio Grande near Fort Quitman, Texas within the Segment 2307 (Rio Grande below Riverside Diversion Dam).

### Formal Environmental Clearance

**Environmental Clearance:**

Pursuant to the provisions of the General Law on Ecological Equilibrium and Environmental Protection regarding Environmental Impact Statements, Mexico’s Secretariat of the Environment and Natural Resources (SEMARNAT) issued Official Communication DOEIA.IA.969/2008 on March 6, 2008, in which the agency determined that the project does not require an
Environmental Impact Assessment, inasmuch as the proposed activities will be developed in an area already impacted by human activities.

Pursuant to the U.S. National Environmental Policy Act (NEPA), a transboundary impact study was developed and submitted for consideration to the United States Environmental Protection Agency (EPA). A 30-day public review period was opened on May 22, 2009 to receive questions or requests for clarifications. Finally, a Finding of No Significant Impact (FONSI) was issued by the EPA on June 23, 2009, establishing that the project will not result in significant environmental impacts that may affect the U.S. border area.

Pending Issues
None.

Criterion Summary:

While Official Communication No. E/117-D/2006 of September 26, 2006 pursuant to a No-Objection determination by Mexico's National Institute of Anthropology and History (INAH, for its initials in Spanish) was originally issued for a wastewater collection project component certified in 2007 for the same community; it is also applicable to the proposed water component, since the proposed tasks will be developed in an area previously impacted by human activities.
3. Technical Feasibility

3.a Technical Aspects

**Project Development Requirements**

**Design Criteria:**

The project was developed in accordance with technical specifications contained in the Water, Wastewater Collection, and Treatment Manual prepared by CONAGUA's Technical Directorate.

The project includes the following components:

- Approximately 31,440 linear feet (9,583 m) of 3" diameter PVC piping, and 13,865 linear feet (4,226 m) of 4" diameter PVC piping
- Supply and installation of 360 domestic hookups.
- Installation of a new Disinfection Unit.
- Looping.
- Telemetry system to automate well-storage tank

The final design includes the implementation of Green Building practices as part of the technical construction specifications.

**Appropriate Technology**

**Assessment of alternatives:**

Potable water.

- Alternative 1. No Action. The no action alternative involves continuing to operate under the current water supply conditions, which fail to meet acceptable regulations established for the water system as to quality, quantity, or appropriate operation.
- Alternative 2. Expanding the water system to achieve 100% coverage. This alternative also proposes the implementation of a new disinfection unit, looping of the water distribution system, and automation of well-storage tank.

**Property and Right-of-Way Requirements**

**Requirements:**

Inasmuch as water distribution lines will be laid on existing municipal rights of way and easements, no additional land needs to be purchased for the project.

**Project Tasks and Timelines**

**Project Timeline**

The construction of the different project components is estimated to be completed in approximately 6 months. Construction tasks are expected to begin in October 2009.
3.b Management and Operations

Project Management
Resources: The management and operation of the project rely on the responsibility of the sponsor, who has the adequate resources and personnel for this purpose.

Junta Central de Agua y Saneamiento del Estado de Chihuahua will provide technical assistance and oversight to the Junta Rural de Agua y Saneamiento de Colonia Esperanza (JRAS) for the operation of the proposed system.

Operation and Maintenance
Organization: JRAS has a President, a Secretary, a Treasurer, three alternates and also the personnel required to operate and maintain the water system. Additionally, the utility will receive assistance from JCAS, the state utility, which has available personnel specialized in water system operation and maintenance.

Operation Plan: The Final Design incorporates an Operation and Maintenance Manual that includes the primary tasks needed to ensure a proper operation of the system and to prevent breakdowns in the proposed infrastructure.
## Permits, licenses, and other regulatory requirements:
The project sponsor has the following documentation available:

- Water rights (CONAGUA)
- Finding of No Impact to historical or cultural properties (INAH)
- Technical File validated by CONAGUA
- State Environmental Clearance

## Reviewing agencies:
- EPA
- BECC
- NADB
- CONAGUA
- Junta Central de Agua y Saneamiento de Chihuahua (JCAS)

## Pending Issues:
None.

## Criterion Summary:
The Final Design has been reviewed by BECC, NADB and validated by CONAGUA.
4. Financial Feasibility

4.a Proof of Financial Feasibility

Financial Conditions

Information submitted: JRAS’ financial statements, project costs, and socioeconomic information.

Results of the analysis: JRAS will be able to generate the necessary cash flow to meet the operation and maintenance costs of the additional system components as well as enable the funding of the reserves; however, they do not have the capacity to contract debt.

Project Cost, Financial Structure, and Other Capital Funding Plans

Concept: Expansion of the drinking water distribution system to unserved areas.

Construction Cost: $333,443.88 USD

Financial Structure:

<table>
<thead>
<tr>
<th>Source</th>
<th>Type</th>
<th>Amount (USD$)</th>
<th>%</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mexico (JCAS/ Federal)</td>
<td>Grant</td>
<td>$166,721.94</td>
<td>50.0</td>
</tr>
<tr>
<td>BEIF-NADB</td>
<td>Grant</td>
<td>166,721.94</td>
<td>50.0</td>
</tr>
<tr>
<td><strong>Total:</strong></td>
<td></td>
<td><strong>$333,443.88</strong></td>
<td>100.0%</td>
</tr>
</tbody>
</table>

Primary Source of Income

Source of payments for project: This does not apply because none of the funding sources being considered for this project include loans or other reimbursable components.

An analysis by NADBank concluded that the Project sponsor generated sufficient revenues to cover operation and maintenance costs of its water and wastewater systems. However, it does not have any debt capacity. Therefore, a loan waiver request for this Project was made to EPA and approved on May 1, 2009.

4.b Legal Considerations

Project management: The project will be managed by the JCAS, which has adequate staff to manage the proposed infrastructure, as well as the capacity to address any potential emergency related to the project's operation and maintenance.
Pending Issues:

None

Criterion Summary:

The analysis of the information available indicates that the Project has an adequate financial structure, and the JRAS, with support from the JCAS, has the required resources and capacity to manage and operate the system.
5. Public Participation

5.a Community Environmental Infrastructure Projects – Community-wide impact

<table>
<thead>
<tr>
<th>Local Steering Committee</th>
<th>The Steering Committee was formally installed on January 28, 2009 at a meeting held in the Salon Ejidal of Colonia Esperanza. At this meeting, a Board of Directors was elected.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date of Establishment:</td>
<td>The Local Steering Committee consist of the following members:</td>
</tr>
</tbody>
</table>
| Local Steering Committee Members: | Chair: Manuela Hernández González  
Secretary: Aurelia Pacheco Ayala  
Alternates: Saúl Rodríguez Barraza  
Rodolfo Tarín Quiñonez  
Verulo García García |
| Date of approval of Public Participation Plan: | The Comprehensive Community Participation Plan developed by the Local Steering Committee was approved by the BECC on March 3, 2009. |
| Public access to project information: | The project's technical and financial information was made available to the public for review. |
| Public access to project information: | The Local Steering Committee, with assistance from the project sponsor, prepared the following documents: |
| | • Flyers  
| | • Brochures  
| | • Megaphone advertising  
| | • Radio announcements |
| The above media outlets were used to inform the community about the project. |
| Additional outreach activities: | Development and dissemination of a project fact sheet. |
| First Public Meeting: | A 30-day advance notice was published for the First Public Meeting on the "Diario de Juarez" on February 28, 2009. |
| | The first public meeting was held on April 3, 2009 to inform the community about the project's technical aspects. The meeting was held at 18:00 hrs. On the |
The meeting was attended by 38 residents who answered project surveys. 100% of those surveyed said they were able to fully understand the project and explicitly expressed their support.

**Second Public Meeting:**

The second public meeting will be announced on July 7, 2009 and will be scheduled for July 19, 2009 at the Salon Ejidal in Colonia Esperanza. The purpose of this meeting is to inform the community about the project's financial aspects.

**Final Public Participation Report**

**Final Report:**

The Local Steering Committee and the sponsor will prepare the Final Public Participation Report to demonstrate that the proposed objectives were fully met to BECC's satisfaction.

**Post-Certification Public Participation Activities**

**Post-Certification Activities:**

The project sponsor, in coordination with the Local Steering Committee, will provide a general description of public participation activities that may be carried out after the project's certification to support its implementation and long-term feasibility.

**Pending Issues:**

Second public meeting and Final Public Participation Report.

**Criterion Summary:**

The project's Local Steering Committee is the same one that was established for the wastewater collection component certified in 2007.
## 6. Sustainable Development

### 6.a Human and Institutional Capacity Building

**Project Operation and Maintenance:**

The project sponsor will be the agency responsible for operating and maintaining the water distribution system. The sponsor has the basic institutional and human capacity needed to operate and maintain the proposed water distribution system.

**Human and Institutional Capacity Building:**

Actions within the scope of the project that contribute to strengthen the institutional and human capacity of the Junta Central de Agua y Saneamiento de Chihuahua include:

- Provide and improve water services in a continuous, efficient, and cost-effective manner.
- Training and education for the utility's operating staff throughout its different areas, to provide essential services that meet the needs of the community.
- Optimize the use of water and make the community aware of the importance of water resources for the development of the local community.
- Basic technical training to the operations and maintenance staff responsible for the new infrastructure that will be built as a result of the project's implementation.

### 6.b Conformance to applicable Local, State, and Regional Regulations and Conservation and Development Plans.

**Local and Regional Plans addressed by the project:**

The proposed project conforms to applicable plans and actions described in the following documents:

- Master Plan for Improvements to Water, Wastewater and Collection Services in Riparian Communities in the Upper Rio Grande, Juarez Valley.
- The project adheres to the U.S.-Mexico Border 2012 Environmental Program by meeting Goals 1 (promoting the increase of water connections) and 4 (promoting improvements to water utility efficiency).

### 6.c Natural Resource Conservation

The proposed improvements to the local water distribution system will help increase its physical efficiency and consequently will reduce withdrawal rates in the local aquifer, which supplies water to this community and the Juarez Valley in general.
The final design includes the implementation of Green Building practices as part of the technical construction specifications.

6.d Community Development

The completion of this project is crucial for the development of the community. The tasks proposed by the project will contribute to reduce the incidence of water-borne and arboviral diseases resulting from the use of non-potable water.

The implementation of a new drinking water system will promote the development of the local community, since it will help reduce the incidence of water-borne diseases and improve the quality of life of Colonia Esperanza residents.

Pending Issues:

None.

Criterion Summary:

The project complies with the Sustainable Development Criteria.
Available Project Information:

- Official Communication No. E/117-D/2006, in which INAH finds no objection for the development of this project in the Colonia Esperanza area, inasmuch as no historical monuments of archeological settlements exist in the area.

- EPA's "Finding of no significant impact" (FONSI) regarding the Colonia Esperanza project, dated June 22, 2009.

- Master Plan for Improvements to Water, Wastewater and Collection Services in Riparian Communities in the Upper Rio Grande, Juarez Valley (Plan Maestro para el Mejoramiento de los Servicios de Agua Potable, Alcantarillado y Saneamiento en Poblaciones Ribereñas del Alto Bravo, Valle de Juárez), developed by ICISA (BECC, December 2000).
